

MODULE 3 · CHOOSING AI FOR YOUR LAW FIRM

Assistant Wiring Canvas

One page a partner who has never read a technical document could follow. If questions 2 or 5 are hard, you have found your real project.

1 · Who can use it?

Which roles, and how do they sign in?

2 · What can it read?

Name the specific collections — “the approved template library and closed matters from 2023 onward”, never “our documents”.

3 · What does it produce?

A draft, a summary, a flag, an extraction — be exact.

4 · Who approves it, and what does approval look like?

A click, a signature, an edit?

5 · Who owns the collection?

Named person. Keeping documents current is now a standing job — when an answer is wrong, this is who fixes it.

Remember why question 5 matters: the assistant looks documents up at question time. It does not learn your templates. A wrong answer almost always means the document was wrong, not the model.

6 · Three behaviours to require in the contract

- ☐ Citations — every substantive answer links to the internal document it came from, and the link opens
 - ☐ Abstention — it says “I don’t know” when the collection doesn’t support an answer
 - ☐ Model portability — you can change the underlying model without rebuilding the workflow
-
