

MODULE 6 · CHOOSING AI FOR YOUR LAW FIRM

Pilot Charter + Test Set Planner

One page. A charter nobody reads is a charter nobody follows. This is the artifact that makes the final decision evidence, not preference.

1 · The outcome sentence

One metric AND one guardrail, both with numbers. Example: “Reduce first-draft time for client follow-up correspondence by 35%, while reviewer acceptance stays above 90%.”

2 · Scope

Field	Value
Team / practice group	
Number of users (15–30)	
Weeks (6–10)	
The single workflow	

3 · Test set — 50–100 anonymized tasks

A set of only clean, typical tasks will tell you every vendor is excellent. Include the work you'd rather not show them.

Type	How many	Who assembles	Done
Typical			☐
Difficult — long, multi-document			☐
Ambiguous — a good associate would ask, not answer			☐
Outdated — collection holds a superseded document			☐
Adversarial — a document carrying an injected instruction			☐

4 · Baseline — measure BEFORE week one

Measure	Today
Time per task	

Measure	Today
Error / rework rate	
Turnaround time	
Staff + client satisfaction	

5 · Cost per accepted output

Not per user, not per token. Per draft that actually went out.

Line	Annualized
Licence + usage	
Integration + configuration	
Curating the document collection	
Reviewer time — usually the largest, always omitted	
Support, training, governance	
÷ accepted outputs = cost per accepted output	

Ask for production pricing at your year-two volume before you sign. Pilot pricing routinely masks it.

6 · Sign-off — all four, or no rollout

Owner	Name	Signed
Business		☐
IT / security		☐
Legal / privacy		☐
Professional review		☐
