

MODULE 5 · CHOOSING AI FOR YOUR LAW FIRM

Weighted Vendor Scorecard

Set the weights BEFORE you see any scores. Weights written afterwards get shaped to fit the answer someone already wanted.

1 · Weights — fill this column first, then stop

Must total 100. For a firm your size, data protection + identity/permissions + auditability + accuracy-on-your-work should together carry more than half.

Criterion	Weight	Option A	Option B	Option C
Data protection — no training on your data by default, encryption, retention, residency				
Identity + permissions — SSO, MFA, provisioning, document-level permissions in retrieval				
Auditability — prompts, sources, outputs, reviewers, tool calls, access; exportable				
Accuracy on YOUR work — scored on your anonymized documents				
Grounding — citations, abstention, controls against unsupported claims				
Security controls — injection defences, scanning, least-privilege, allowlists, kill switch				
Integration — document management, practice management, M365 / Workspace, CRM				
Commercial control — pricing, caps, chargeback, exit terms, portability				
Vendor maturity — security docs, incident notice, SLAs, model-change notice, subcontractors				
TOTAL	100			

2 · Shortlist three KINDS, not three of the same

Category	Option	Best at
Productivity copilot — inside the tools people already use		
Controlled knowledge assistant — retrieval over approved material, citations mandatory		
Specialist workflow tool — intake, clause extraction, proposal automation		

3 · Measured on your own documents

Measure	A	B	C
Factual accuracy			
Citation quality — does the link support the claim			
Completeness			
Reviewer edit distance — how much had to change			

Ask every vendor: what happens when you change the underlying model? A silent swap voids your validation and nobody tells you.
